Roxtorpsgatan 7  
581 10 Linköping

## ***Arla investing in new technology – Problue Flex MOD***

Arla Linköping dairy, located about 2 hours south of Stockholm is one of the larger dairies in the Nordic region. The dairy produces, among other things, Arla's lactose-free products as well as yoghurt, sour milk and crème fraich.

The dairy has for many years had a close and good collaboration with Nordson. At present, 22 units from Nordson are installed.

Together, we work towards an optimized process where our innovations give Arla the opportunity to achieve its goals in productivity, operational safety and work environment.

During 2020 - 21, Arla Linköping invested in 10 Flex MODs in order to minimize down time, increase efficiency and improve the working environment and safety.

So far, the outcome has been very positive and we will, together with the dairy, develop a more detailed follow-up when all units have been in operation for at least 6 months.
